

Harbor Lights Website Rebuild

Action Lists: Prototype, Client, Development · Revision 2

Updated August 15, 2026 · Waterside Group Marketing · Source: review of harbor-lights.vercel.app against harborlightsri.com, plus client notes of August 15

Three lists, one owner each. Nothing is duplicated across them, so an item completed in one place does not need repeating in another. Items marked *[blocked]* depend on a client decision or a supplied number and should be stubbed rather than guessed. Items marked *[Aug 15 note]* are new or revised in this revision.

Sequencing has not changed: items 1 to 3 on the development list and items 1 to 7 on the client list are the same problem seen from two ends. Until the rates, hours, and capacities exist as structured content, the prototype cannot place them and the site continues to lose to competitors who publish theirs.

01 Prototype Builder

Owner: prototype author · Scope: structure, copy placement, page assembly

Launch blockers

- ☐ 1. Footer address: change “Flying Bridge Marina, 200 Gray St, Warwick RI” to **Harbor Lights Marina**. Keep the Flying Bridge copyright line but separate it visually from the address block.
- ☐ 2. Jingle Mingle: December 13, 2026 is a Sunday, not a Friday. Hold the day-of-week until confirmed. *[blocked]*
- ☐ 3. Reconcile event capacity. Three different numbers currently appear across About, Corporate, and the production homepage. Use one. *[blocked]*
- ☐ 4. Golf body copy must state 9 holes, par 36, and explain the two-loop 18. “Nearly 6,000 yards from the tips” reads as an 18-hole course.
- ☐ 5. Strip the password gate so each page carries a single H1.

Navigation and global

- ☐ 6. Remove **About** from the primary nav. Keep it in the overflow or hamburger menu and in the footer. *[Aug 15 note]*
- ☐ 7. Reorder the primary nav to match stated usage: Par & Tackle, Golf, Weddings & Events, Pool & Drift Bar, Marina. *[Aug 15 note]*
- ☐ 8. Retire the **Plan Your Visit** label sitewide. It is too vague to carry a CTA. Replace the header button with **Book**, collecting tee times, tables, and dockage. *[Aug 15 note]*
- ☐ 9. Rename **What’s On** to **Calendar** everywhere and point it only at the events calendar. It should not double as a general destination label. *[Aug 15 note]*
- ☐ 10. Rename the Dining nav label to **Par & Tackle** so the brand is searchable.
- ☐ 11. Rebuild the Dining dropdown as three items: Overview, Reservations, Catering. Fix the current duplicate where Overview and Par & Tackle point to the same URL. *[Aug 15 note]*
- ☐ 12. Build the **Catering** page structure now, to ship unpublished until offerings are finalized. *[Aug 15 note]* *[blocked]*

- ☐ 13. Build a **Meet the Team** page listing department heads with title and direct contact. Design it to work without headshots, since photography comes later. *[Aug 15 note] [blocked]*
- ☐ 14. Build a real **Boat Club** page. Stop sending cold traffic straight to the Stellar registration form. *[blocked]*
- ☐ 15. Build the **Transient Slips** and **Boat Storage** pages the new footer links require. Neither exists today. *[Aug 15 note] [blocked]*
- ☐ 16. Add department phone routing rather than one number serving five departments. *[blocked]*
- ☐ 17. Footer action links, as specified: Par & Tackle Reservations, Book a Tee Time, Weddings & Events, and a Marina group holding Transient Slips, Boat Storage, Service, and Boat Club. *[Aug 15 note]*
- ☐ 18. Remaining footer additions: seasonal hours, department extensions, gift cards, employment, privacy and accessibility statements, and a labeled parent-company link to flyingbridgemarina.com.

Homepage

- ☐ 19. Set the section order to the stated usage priority: Par & Tackle, Golf, Events, Pool & Drift Bar, Marina. *[Aug 15 note]*
- ☐ 20. Replace the “Your One-Of-A-Kind Destination” prose block with a five-door router in that same order, each door carrying one number and one action. *[Aug 15 note]*
- ☐ 21. Hero subline: state the property concretely (acreage, slips, holes, capacity) instead of describing it.
- ☐ 22. Replace the asserted “One Property, Endless Options” band with the dock, tee off, dine sequence and its actual numbers.
- ☐ 23. **Stay in the Loop**: add interest checkboxes so subscribers self-segment rather than receiving everything. *[Aug 15 note] [blocked]*

Vertical pages

- ☐ 24. Move the 16-hotel directory to a single page at **/hotels-transportation/**. The **/plan-your-visit/** name is retired. Link to it from Weddings, Special Events, and Corporate. *[Aug 15 note]*
- ☐ 25. Weddings: add the current wedding awards and replace the unattributed “award-winning” claim with the named awards and years. *[Aug 15 note] [blocked]*
- ☐ 26. Weddings: move the non-wedding disclaimer near the top, add the capacity table, and build the Real Weddings gallery that currently exists only as a heading.
- ☐ 27. Corporate: put the room capacity matrix and AV specs directly under the hero, with hotels linked out rather than embedded.
- ☐ 28. Golf: remove the Next Gen Membership promotion from the top of the page and place **Ralph’s Golf Special** there instead. *[Aug 15 note] [blocked]*
- ☐ 29. Pool: change the **Pool Pass Agreement** button to **Membership Information**. *[Aug 15 note]*
- ☐ 30. Pool & Drift Bar: lead with what is open to the public. Move the sold-out membership notice below it, framed as a waitlist.
- ☐ 31. Marina: split seasonal and transient above the fold. They are two customers with two different next steps.
- ☐ 32. Dining: put hours above the fold. Add private dining and rehearsal dinners to the page, not only to Reservations.

- ☐ 33. Insert the golf and marina rate tables once supplied. *[blocked]*

Forms and media

- ☐ 34. Audit and correct every form label. Visible persistent labels on all fields, no placeholder-only inputs, and field sets that match the vertical (event date and headcount for events, boat make and engine for service, boat length for slips).
[Aug 15 note]
- ☐ 35. Alt text on all images, starting with the events calendar where 61 of 66 are empty.

02 Client

Owner: Harbor Lights · Scope: decisions, verified numbers, source assets

Numbers to confirm

- ☐ 1. Event capacity by space and layout: Grand Ballroom, Back 9, tented lawn, private rooms. Seated, standing, and theater.
- ☐ 2. Current golf rate card: 9 and 18 holes across public, senior, early bird, slip holder, and league, plus power and pull cart fees.
- ☐ 3. Current marina rate card: summer slips by dock, transient per foot, spring work, bottom paint, haul and block, short haul, winter land storage, shrink wrap, environmental disposal, pump-out.
- ☐ 4. Travel lift capacity. 50-ton is stated sitewide; the production haul-out pricing references 70-ton.
- ☐ 5. Slip count. The site says 225; the brokerage announcement said over 208.
- ☐ 6. Jingle Mingle 2026: exact date and day of week.
- ☐ 7. Seasonal hours for every outlet (restaurant, bar, fuel dock, pro shop, pool, food truck) and the dates each season opens and closes.

Decisions

- ☐ 8. Pricing transparency. Publishing golf and marina rates was standard on the production site and the prototype dropped it. Confirm whether that was intentional, and whether a wedding and corporate per-head starting range can be published.
- ☐ 9. Whether boat sales, brokerage, and rentals will operate out of Warwick. This changes the marina architecture materially.
- ☐ 10. Boat Club: cost, fleet, reservation rules, who it is for, and who operates it.
- ☐ 11. Whether the transient complimentary docking offer (call the dockmaster ahead, Channel 9 VHF) still stands. The prototype removed it.
- ☐ 12. Entity naming going forward: Harbor Lights Marina or Flying Bridge in Rhode Island, and how that resolves across Google Business Profile, Apple Maps, Dockwa, and directory citations.
- ☐ 13. Whether membership applications move from PDF to online forms, and if so, whether payment is collected at submission.
- ☐ 14. Next Gen Membership: whether it comes off the golf page entirely or moves further down once Ralph's Special takes the top slot. *[Aug 15 note]*
- ☐ 15. Whether an interim Catering page carrying a short description and a contact CTA is preferable to keeping the page dark until Aaron finalizes offerings. *[Aug 15 note]*
- ☐ 16. Newsletter interest categories, and which email platform receives the segmented signups. *[Aug 15 note]*

Assets to supply

- ☐ 17. **Wedding awards.** The attachment did not come through. Send the award names, issuing bodies, years, and any badge artwork with usage terms. *[Aug 15 note]*

- ☐ **18. Ralph's Golf Special.** Name as it should read, rate, eligibility, dates, days, and terms. *[Aug 15 note]*
- ☐ **19. Meet the Team.** Department heads with title, direct phone, email, and confirmation that each is willing to be listed publicly. Headshots can follow. *[Aug 15 note]*
- ☐ **20. Catering.** Offerings, package structure, minimums, and lead times from Aaron. *[Aug 15 note]*
- ☐ **21. Transient slips and boat storage.** Rates, seasons, process, and what is included, for the two new pages. *[Aug 15 note]*
- ☐ **22.** Form label corrections: which specific fields are wrong or missing today. *[Aug 15 note]*
- ☐ **23.** Real wedding photography with usage rights, ideally 30 or more images across ceremony, ballroom, and outdoor settings.
- ☐ **24.** Reviews and testimonials.
- ☐ **25.** Ballroom and event space floor plans with dimensions, in a source format rather than a flattened PDF.
- ☐ **26.** Restaurant and Drift Bar menus as editable text, not PDF exports.
- ☐ **27.** Golf scorecard, course layout, and range and pro shop details.
- ☐ **28.** Golf professional bios and the current clinic, lesson, and league schedule.
- ☐ **29.** Winter storage checklist and haul-out process.
- ☐ **30.** Corporate proof: past client names where permitted, and photography of a room set for a meeting rather than a wedding.
- ☐ **31.** Any press coverage since the acquisition.

03 Development Team

Owner: co-op dev team · Stack: Payload CMS, Next.js, Vercel

Content modeling

- ☐ 1. Model rate cards as a structured collection, not rich text. One rate card renders as an HTML table, feeds pricing schema, and is reusable without duplication. Applies to green fees, slip rates, and storage.
- ☐ 2. Model hours once, globally, with seasonal variants. Render to page, footer, and structured data from the same field. Hours currently live in three places with no single source.
- ☐ 3. Menu as a structured collection (section, item, description, price) so it renders as HTML rather than a PDF link. The Catering page will reuse this model.
- ☐ 4. Spaces and Venues collection with capacity by layout, dimensions, and AV, powering the wedding and corporate capacity tables.
- ☐ 5. Events collection with venue, category, recurrence, and time. It already drives the calendar, homepage, dining, and pool pages. Keep it as the single source; do not hardcode event lists into templates.
- ☐ 6. Team collection: name, title, department, direct phone, email, optional headshot. The template must render cleanly with no image present, since headshots come later. *[Aug 15 note]*
- ☐ 7. Hotels and Transportation as its own collection feeding one page.
- ☐ 8. FAQ collection, reusable per vertical page.
- ☐ 9. Awards collection for the wedding page so badges and years are editable without a deploy. *[Aug 15 note]*

Publishing and workflow

- ☐ 10. Draft and publish states must work end to end. The Catering page ships unpublished: excluded from nav, sitemap, and internal search, and returning 404 or noindex until published. Publishing must not require a redeploy. *[Aug 15 note]*
- ☐ 11. Footer action links should be driven by the nav collection rather than hardcoded, so the two cannot drift apart. *[Aug 15 note]*

SEO and structured data

- ☐ 12. No JSON-LD exists anywhere on the prototype. Add LocalBusiness with Marina, GolfCourse, Restaurant with menu and openingHoursSpecification, EventVenue, Event on every calendar item, FAQPage, and BreadcrumbList.
- ☐ 13. Add canonical tags. None are present.
- ☐ 14. Trailing slash inconsistency: internal links use /about-us/, the generated sitemap emits /about-us. Pick one and make canonicals, sitemap, and internal links agree.
- ☐ 15. Remove **Disallow:** / from robots.txt at launch.
- ☐ 16. Build the WordPress redirect map before cutover, including the numerous indexed /events/* detail URLs.

Functionality

- ☐ 17. Calendar thumbnails must preserve the aspect ratio of the uploaded image. No fixed-height crop. Constrain one dimension and let the other vary, or store a focal point per image so crops stay intentional. *[Aug 15 note]*

- ☐ **18.** Newsletter signup: interest field as a multi-select mapped to segments in the email platform, passed on submission rather than reconciled later. *[Aug 15 note]*
- ☐ **19.** Form components: persistent visible labels, correct autocomplete and inputmode attributes, and error messaging tied to the field rather than the form. *[Aug 15 note]*
- ☐ **20.** Events calendar filters must persist in the URL as query parameters with scroll restoration, so Back returns to the filtered list at the same position. This was the specific failure identified in the Flying Bridge finder work.
- ☐ **21.** Section-aware sticky mobile action bar: Book a Tee Time in golf, Reserve a Table in dining, Check Dockage in marina, Request Dates in events.
- ☐ **22.** Form handling through server actions with spam protection, routing by vertical to the correct inbox, and an immediate notification path for speed to lead.
- ☐ **23.** Third-party embeds (TeeItUp, Toast, Dockwa) need lazy loading, a visible fallback link if the iframe fails, and outbound conversion tracking. Two of three already have fallback copy; make it consistent.
- ☐ **24.** Make alt text a required field on the media collection so the current gap cannot recur.

Measurement and quality

- ☐ **25.** Single GTM container. Define conversion events per vertical: tee time click-out, Dockwa click-out, Toast click-out, and each form submission tagged by vertical.
- ☐ **26.** Accessibility pass: WCAG 2.2 target sizes, visible focus states, and heading order once the password gate is removed.
- ☐ **27.** Performance: confirm the hero preload is not competing with the LCP image, and check the events calendar page weight, currently around three times the next-largest page.
- ☐ **28.** Confirm how this build shares the Payload instance with the other portfolio rebuilds, since Harbor Lights and Flying Bridge share ownership, some content, and cross-links.

Open Questions From the August 15 Notes

Four items were assumed in order to keep the lists moving. Correct any that are wrong.

- **“Events” on the homepage.** Read as Weddings & Events, the business vertical, rather than the events calendar, since the calendar is handled separately by the What’s On change. If the intent was the calendar, the homepage order changes.
- **Primary nav order.** Set to match the homepage usage order. Nav and homepage do not have to agree, but splitting them means two different answers to the same question about what matters most.
- **The About treatment.** Read as: off the primary bar, still reachable from an overflow or hamburger menu on both desktop and mobile, plus the footer. If desktop should have no overflow menu at all, About lives in the footer only.
- **Replacing Plan Your Visit.** The header still needs one action button. Proposed **Book**, since it covers tee times, tables, and dockage in one place. **Contact** is the alternative if a single lead path is preferred over three booking systems.
